1.3, and viscosity at 20 degrees C in 60% soln. for ring marking of 800-1,200 cP, and in 90% soln. for printing of 55,000-59,000cP, together with a solvent of evaporation value 50-450 and pigment. The inks dry very rapidly (e.g., 5 sec. at 200-250 degrees C) and heating to >300 degrees C is avoided. They resist processing conditions and colour changes and are suitable for electronic reading.

The method of modifying the surface comprises an oxidizing flame and a silicating flame. A gel layer is used to reduce the dampness of the surface during the oxidizing flame treatment. The silicating flame causes a layer of 6nm, or 5-50nm but esp. 10-30nm at a temp. of 900-1200 degreesC at 0.1-1s.

Should anything further be required, a telephone call to the undersigned, at (312) 226-1818, is respectfully invited.
